Product Name :

Advanced Hydrology Study System

NLAB-TECHNICALAB26009

Description:

Advanced Hydrology Study System

Technical Specification:

A self contained floor standing apparatus for hydrology and fluvial geomorphology demonstrations, comprising:

A 2m x 1m stainless steel tank, tiltable using a dual linked jacking system

8 stainless steel spray nozzles mounted on an adjustable height gantry

A stilled tank providing a formed flow river inlet

Two flowmeters (3L/min & 5L/min) to measure and adjust the inlet flows

An outlet tank allowing both water and sediment flow to be measured

Two French drains, two well points and 20 manometer tapping points linked to a manometer bank

A large plastic sump tank plus a recirculating pump

Experimental capabilities include:

Run-off hydrographs from model catchments

Draw-down curves for one well and two well systems

Ground water flow and hydraulic gradients

Model stream flow in alluvial material

Formation and development of river features over time

Sediment transport, bedload motion, scour and erosion

A version is available with instrumentation to measure both water and sediment run-off in real time.

The package included data logging and educational software, (requires a customer provided PC).

Stilled inlet tank provides developed river flow conditions, allowing the full length of the tank to be used for river simulations

Novel outlet tank design for water flow and sediment flow measurement

Stainless steel sand tank

Dual jacks provide adjustable tilt

Adjustable spray nozzle height

Use of fine grade sand allows detailed feature development

Single grade of sand for all defined demonstrations, no need to change the sand

Control and measurement of inlet flows

Flexible configuration allows a wide range of simulations

Flexible configuration allows a wide range of simulations

Computer data logging option for sediment and water outlet flow measurement
